The 35 U.S.C. 101 rejection of claims 1-5, 11-15 and 21-25 are withdrawn in response to Applicant's amendments to the claims.

### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance.

The closest prior art Leachman et al, IMPReSS, Cargill et al., USPN 2003/0050817, Shipman USPN 5,819,232, fail to teach or suggest either singularly or in combination a system/method for managing the capacity of a production line comprising: providing a risk database recording risk information for a first demand, wherein the risk information comprises a first percentage of a low risk part of the first demand and a second percentage of a high risk part of the first demand, a first order rate for the low risk part, and a second order rate for the high risk part, wherein the high risk part is considered as an overestimated part of the first demand, and the first order rate and the second order rate are the possibility of the low risk part and the high risk part to become actual order, respectively;

dividing the first demand into a low risk demand and a high risk demand according to the first percentage of the low risk part and the second percentage of the high risk part, wherein the low risk demand is obtained by multiplying the first demand by the first percentage, and the high risk demand is obtained by multiplying the first demand by the second percentage; determining an expected quantity of the first fabrication; and managing the capacity of the first fabrication by dispatching portions of the low risk demand and the high risk demand to the first fabrication according to the expected quantity, and the first order rate and the second order rate, thus to allocate the capacity of the first fabrication accordingly, wherein a first quantity of the low risk

demand and a second quantity of the high risk demand are dispatched to the first fabrication, the first quantity is less than the amount of the low risk demand, and the second quantity is less than the amount of the high risk demand, and the amount of the first quantity multiplied by the first order rate and the second quantity multiplied by the second order rate is equal to or greater than the expected quantity as recited in independent Claims 1, 11 21 and 31-33.

Applicant's arguments, see Last Two Paragraphs, page 18, filed May 20, 2009, with respect to Leachman, Cargill, and Shipman have been fully considered and are persuasive.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Tsao et al., U.S. Patent No. 7,085,730, teach a product planning system and method.

- Takao et al., U.S. Patent No. 7,298,507, teach a production management system and method that accounts for sales (demand) risk.

- Pericle, U.S. Patent No. 7,379,922, teach a system and method for analyzing the risk ration of customer sales (demand).

- Blanchard et al., U.S. Patent No. 7,487,107, teach a system and method for determining ranges of purchase amounts (demand) based on the probability (risk) of a purchase in future time cycles/periods.

- Yoneda, U.S. Patent Publication No. 2001/0037282, teach a system and method for production capacity planning in a semiconductor fabrication plant.
